## How To Make Your Own Hair Punch Tool

I just used a 45% PVC joint with and end cap to fit, the size I picked was 1/2" Joint Connector and End Cap.

I drilled a small hole in the end cap and then I took some plastic putty kneaded it and filled the end cap with it. Before the plastic putty set-up I inserted the needle into the end cap business end into the putty .

So the eye of the needle was the only thing sticking out.

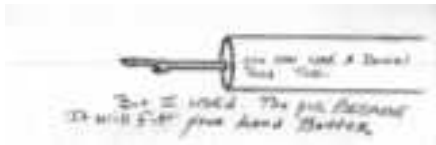

After the putty has set-up I took my Dremel tool and cut the eye of the needle at a slant to make the punch. Then I took a small piece of 1/2' inch PVC pipe to extend the handle about 3" inches. I also took some padding I had and wrapped the handle to make

it comfy and used electrical tape to hold the padding. I bought a 1" inch joint connector to put over the needle when not in use.

So I wouldn't stick myself or break the needle off. Total cost to make this was about \$7.00 bucks, thats counting the putty and tape.
