**Tombstone to Hide Lights**

I want to make another tombstone that can hide lights, speakers, etc. (There is no back to the tombstone, which creates an empty "box". I only have plans so far, but I just got finished tracing my patterns onto foam. ...And yes, I am stealing the idea from scarytombstones.com. He wants \$150 for two of them (plus S&H), but I think I can make some close to as good as his for almost free.

The file for the pattern is attached below. Please tell me what you think.
