

CHRIS' HOME-BUILT HALLOWEEN F/X DISPLAYS

<http://209.150.104.196/halloween/csolsen/>

Rain Proof Black Light

For Illuminating Flourescent Tombstone Epitaphs

Designed for exposure during the month of October

Components: Outdoor garden fixture, Feit Fluorescent Black light (Fry's), cone from motion sensor kit, 4" plumbing union connector, margarita glass

I had to use glass as front shield. A clear plastic cover would absorb the UV from the black light. I sheared off the margarita glass stem with an abrasive cut-off bit with my Dremel.

You can purchase the Feit fluorescent blacklight from Fry's Electronics or www.Outpost.com

Side profile

Use clear bathroom caulking for adhering the front glass shield, so you can pry it off if needed.

Front Black Light

The fluorescent twist blacklight gives off a very strong glow!
