Commercial Flashing Lights

We define "flashing lights" as a regular on-and-off cycle, which repeats. The light need not stay on as long as it stays off, but each on period is as long as any other on period, and each off period matches all other off periods. This is in contrast to "[flickering lights](#)", which we define as having a random or irregular element.

The undisputed king of the flashing lights is the [strobe light](#).

This page lists some commercial light flashers. For the theory of how these work, please see [intro to flashing lights](#).

Lamp Socket Buttons

You can get disk-shaped flasher circuits designed to be inserted into the socket before screwing in a light bulb.

The web site of <http://www.cooperwiringdevices.com> list several such "Socket Button" devices. [7/19/2004]

Catalog No.	Description	lamp base	rating	Flashes/Minute

1008	Superior Flashers	medium	60W 120V	65 to 85
472T-125	Gacor Twinkle	medium	60W 120V	50 to 75
472B-125	Gacor Beacon	medium	60W 120V	28 to 33
