## Floodlight Baffles

Here's an idea I came up with to help hide that annoying side glare from floodlights. I took some 2 gal black plastic plant containers and made an opening in the bottom with a 1 1/2" hole saw chucked into my drill. I also made an opening off to the side of that hole to allow for the cord to come out without binding.

Then I attached the base plate to the bottom of the planter using screws.

And here's the finished product.

The most important thing to remember is to make sure that the bulb is centered and does not touch any part of the container. The bulb should rest just below the edge of the opening. I also used a couple of 5 gal containers and the bulb could be set lower into the container, but still needs to be centered. You could beef this up a bit by using a thin piece of plywood both on the inside as well as the outside and screw into those along with the planter and bulb plate. I didn't bother with these and they're holding up beautifully.
