## **Spare Parts-Animatronic Skull**

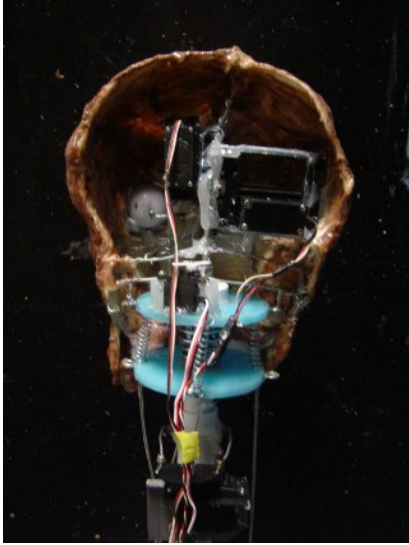

<http://www.born2haunt.com/B2HSpareparts01.html>

This is my latest project called spare parts because its made of stuff that I had laying around. Its also a training project to learn how to control servos using a basic stamp. It has 6 servos so far. The eyes have 2 for up & down and Left & right movement. There is one servo for the mouth and two for left/right & front/back tilt. Then the last turns the head from left to right.

**Not too pretty but everything works so far.  
Maybe once I get it working I'll close the  
back of the head and add a little hair.**

**The servo that controls the neck turning.**
