

# Fog Chiller Crypt

## Halloween Yard Haunt Prop Building

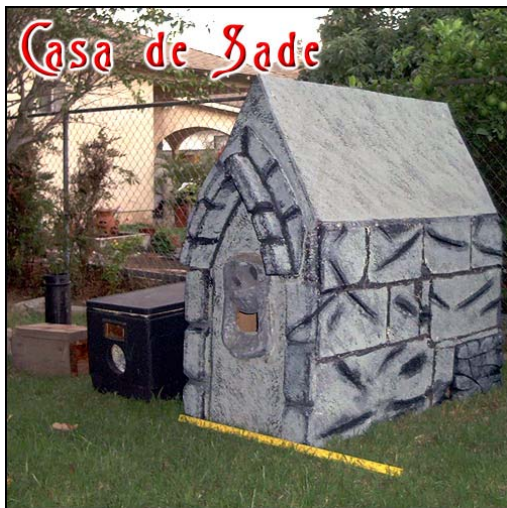

Dog House for a Fog Chiller -

### Materials:

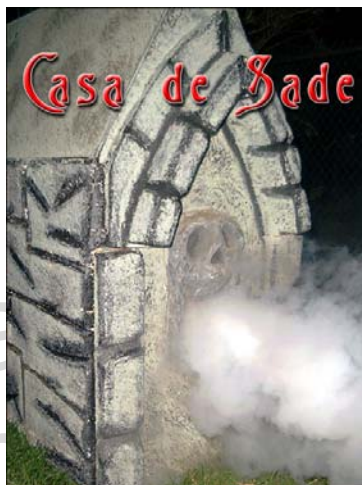

- 1/4 inch thick plywood
- 1 x 2 inch wood stock
- 1 inch wood screws
- Styrofoam
- Paint

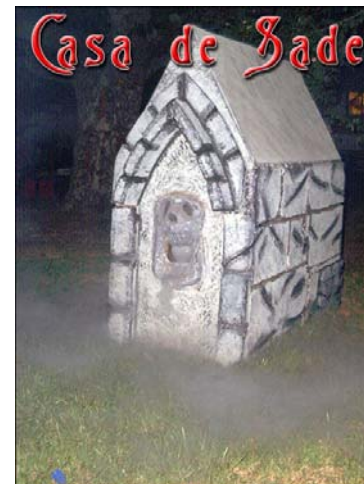

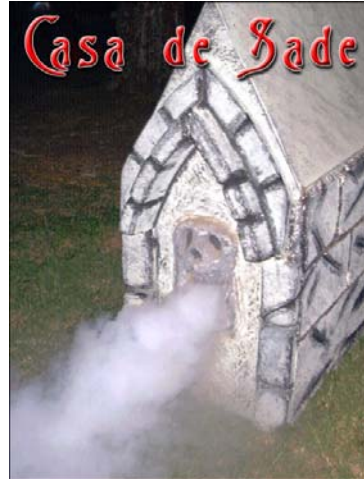

Don't forget, there's a wealth of [Props on Ebay](#)

The yellow rod is a yard stick (for you metric types - that's about 3 feet).

### **The Gibber:**

I am withholding the measurements of the dog house because the size of my ice chest is going to differ from yours. Set up your fog chiller and measure around it. Tip: minimize the amount of cuts by going with the standard size plywood sheets. I don't own a truck and limited to the 2' x 4' smaller sheets. The front, rear, and two roof sheets have a length of 4' each.

I haphazardly followed DeathLord.net's Fog on The Rocks [FOTR] instructions for the above Fog Chiller. I am very glad to say that it will no longer take a 122 clicks to get to the instructions from the homepage but to speed things up I'll get you right to [the FOTR instructions](#).

The above is styrofoam glued to the plywood - [Styrofoam How To](#)

The skull is Great Stuff with a latex skin - [Skull How To](#)

The Dog House covers the ice chest and stand. The fog machine sticks out a bit but not enough for my visitors to see it - plus - I do a nice job of covering my display with a good coat of darkness which helps tremendously to enhance my artistic representations.
