LEDs

Disclaimer: This prop page is provided as-is, for informational purposes only, without warranty of any kind. You are solely responsible for any and all consequences of its use. Selecting this prop page and viewing the information constitutes acceptance of these terms.

These are all over the prop sites. However, LEDs are a joke to use in props unless they are big and bright. 5mm little LEDs of 200 millicandles (mcd) or less are not worth the trouble. Generally, you should get LEDs with over 1000 millicandles (or 1 Candle) of light output. The big 10mm LEDs usually work for this.

You can make a simple LED eyes setup that are turned on with a simple switch

Or you can make this setup that will make the LEDs fade in and out.

Here's some more fun LED circuits to light up pumpkins safely.

You can even make a cylon pumpkin!
