

CHRIS' HOME-BUILT HALLOWEEN F/X DISPLAYS

<http://usersites.horrorfind.com/home/halloween/csolsen/skull-pump.html>

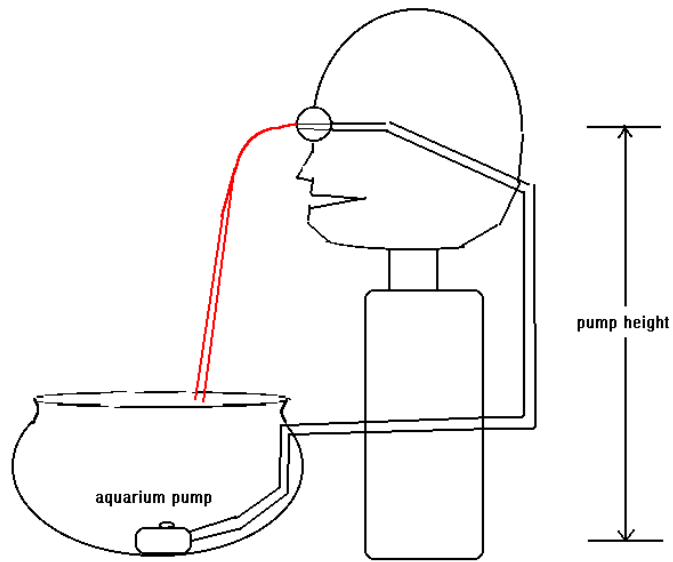

Bloody Eyes Skull

I bought a Glow-in-the-Dark Skeleton 50% off after Halloween. I glued rubber eyes into its eye sockets with holes drilled straight through. I used 1/4" tubing to connect the eyes to the aquarium pump (~\$20). Be aware that aquarium pumps only will pump up so high. Placement of the cauldron to catch the red water will adjust the flow out of the eyes.

I used a small ultrasonic humidifier in the cauldron to give a fog effect, but the falling water disrupts the fog. I illuminated the skeleton with a black light and used a strobe light on the falling water. The falling water under a strobe light give a great effect.

[AMERICAN SCIENCE/SURPLUS now sells an ultrasonic mist-maker module. Ask for #91463, Atomizer, \\$49.95 each](#)
