

A Krause House Halloween

<http://halloween.justageek.net/malibu.html>

Glowing Spider Web, Spider, Victim

Or, How to properly dispose of a cabbage brat doll

Rit, Water, Rope.... Everything a 5 foot spider needs to grow healthy and strong. Soak it. (the rope dummy). YOU NEED COTTON ROPE for this to be effective. I used one roll of cotton (all they had) and one roll of nylon clothesline. The nylon sucks..

I screwed small eye-bolts into the side of the house, and a tree that was about 15 feet away. Thread the rope in a pseudo spider web shape, X'ing the rope for the base, and attaching the spiral to the base. I used Kite String to tie the spiral to the base.

The spider I picked up at [Spencer's Gifts](#) for about \$14.00. The fluorescent orange hour-glass shape was added. I know it's one the wrong side of the spider, sheesh, nobody has problems in believing in a 6 foot black widow spider, but put the hour-glass on the wrong side and watch out!

To brighten things up a little when viewed at night, I thought it would be good to add some glow in the darks cobweb material to the giant web. Here, I enlist some child labor to stretch it into shape.

The finished web. Ohh no! The baby's become a lunch treat!

A night shot.. A little dark, but enough to show the general idea. I'll probably take a better picture later. Notice the difference between the nylon, and cotton rope. In this shot, the nylon is absolutely dark. In person, it glows a little, but the cotton is much better.

A better night shot, but the nylon rope still sucks. Hehehe, you haven't had any fun until you mix rit and water in a spray bottle, and play with it in the black
